Webinar on Polar Connectivity

NORDUnet is inviting you to a webinar on the economic value of submarine cables in the Arctic, and associated topics relating to fiber connectivity between Japan and the EU.

Discover how direct sub-sea fiber connectivity from the EU to Japan and Asia through the Arctic region will add redundancy, and mitigate existing risks with the current EU-Asia connectivity, which is either through the Suez/Egypt or in control by Russia or China.

The webinar will take place on
Wednesday 5 October, 2022 at 10:00 am – 11.30 am CEST.

It will be a 90-minute on-line event for everybody who has an interest in international connectivity, the impact on regional development, and the green agenda for data centers.

You will get the opportunity to explore more regarding the societal and economic impact of fiber connectivity and data centers in the Arctic and the Nordic region at large, including the energy impact.

Speakers and program to be published. Please sign up for the event using this link
[The economic value of submarine cables in the Arctic](#)

Feel free to share this invite and registration link.

The webinar will be recorded, and the recording will be published at the NORDUnet website, www.nordu.net.

We look forward to seeing you on 5 October.

NORDUnet CEO

Valter Nordh
